## Kimtech Pure\* A5 Clean room Apparel - Clean Processed & Sterile with Clean-Don\* Technology

Reusable protective apparel poses a real yet invisible contamination threat to your environment. Testing has found that 100% of the used sterile reusable garments showed a decline in BFE (Bacterial Filtration Efficiency) after washing. The average BFE of reusable drops 25% after laundering and fabric degradation is visible at the sub-micron level, and is enough to allow bacteria to penetrate the material. The more times the garment is processed, the bigger the decline in BFE.

Why take this risk? Choose single-use sterile apparel for the performance, consistency and confidence level your clean room needs.

Kimtech Pure\* A5 single-use apparel provides the highest rating 95%BFE whereas the reusable gown scored a 68%BFE.

### Full Protection Vs. Compromised BFE

Our **KIMTECH PURE\* A5 Sterile Cleanroom Apparel** comes with unique features and specifically manufactured for your needs.

**Innovative Inside-Out Fold** - reduces the risk of touching and contaminating the outside of the apparel.

**Patent-Pending Snap Technology** - built-in snaps gather up legs and arms to lower the risk of touching the floor, automatically release as garment is put on.

**Cloth-Like Comfort** - it has 100% Polypropylene Breathable SMS (Spunbond Meltblown Spunbond) fabric.

**Built-In Thumb Loop** - Keeps garment sleeve from rolling back and exposing arm or wrist.

**Patent-Pending Snap Technology** - Visible Blue Line along the inside of the garment signals the proper place to grasp while gowning, helping workers avoid touching the outside of the garment.

# Traceable™ Products - An Overview

## Introduction to Traceable™ Products

Fisher Scientific™ Traceable™ products include timers, stopwatches, clocks, data-logging thermometers, bench thermometers, differential thermometers, printing thermometers, humidity meters, monitoring/alarm humidity meters, barometers, as well as a range of everyday measurement lab tools.

All of these Traceable™ products are provided with a Traceable™ Calibration Certificate from an ISO/IEC 17025:2005 (1750.01) calibration laboratory.

Thermometer, timer, and humidity certificates are accredited by the American Association for Laboratory Accreditation (A2LA).

The supplied Traceable™ Certificate indicates that the product is traceable to standards provided by the National Institute of Standards and Technology (NIST), a U.S. Government agency within the Commerce Department.

The Traceable™ Certificate complies with ANSI/NCSL Z540-1.

The Traceable™ Certificate includes all of the information to meet today's stringent accreditation demands, government specifications, and ISO 9000 requirements. This information includes serial number, certificate number, model number, calibration test equipment, equipment serial number, equipment calibration due date, NIST test number, unit accuracy, uncertainty, unit test conditions, test points, individual unit's specific test date, unit's next calibration due date, tester's name, and signature of the metrology manager.

Each Traceable™ product is individually serialised, calibrated and certified. An individually serialised Traceable™ Calibration Certificate provides you with the assurance that an independent auditor has checked the methods, procedures, testing, technique, and record-keeping practices of the calibration testing laboratory. The American Association for Laboratory Accreditation (A2LA) is widely recognised internationally through bilateral and multilateral agreements and through its participation in International Laboratory Accreditation (ILAC) and Multilateral Recognition Agreement (MRA). Through A2LA Accreditation, Traceable™ Certificates are internationally recognised by Accreditation Agencies and Services in over 75 countries throughout Europe, the Middle East, North America, South America, Asia, and Africa. There is no need to have the units calibrated locally before use as all European governing bodies fully accept and recognise the Traceable™ Certificate of Calibration.

Finally, all products are produced under ISO 9001, certified by DNV (Det Norske Veritas), and supplied by an ISO 9001 Quality Certified Company. This quality certification provides you with the assurance that you will receive only the finest and most reliable products.

ISO 9001 Certification is a worldwide recognition of the highest possible quality for innovative electronic products and ensures that every item is checked and rechecked for superb laboratory performance time after time. As already described these products are manufactured to the highest standards and undergo rigorous quality assurance and testing procedures to ensure that they deliver on our promise of quality, reliability and value.

Traceable™ is a registered trademark of Control Company.

Through A2LA Accreditation, Traceable™ Certificates are internationally recognised by the following Accreditation Agencies and Services in these countries:

## Last line of defense.

- 0.1 micron filters guard against mycoplasma contamination.
- 0.2 micron filters remove all bacteria.
- 0.45 and 0.8 micron filters for particle removal and fluid clarification.
- 90 mm diameter filters provide large surface area for serum and other hard-to-filter solutions.
- Nalgene Certified. We guarantee it!

## Easy to use shape.

- Ergonomic design.
- 1½ turn screw cap, tapered sides and “grips” make the filter units and storage bottles easy to handle.
- Wide base improves stability on the bench top.

# Filtration

## Unbeatable membranes.

No matter what aqueous fluid you're filtering, we have the right membrane for you:

- PES (polyethersulfone)
- SFCA (surfactant-free cellulose acetate)
- CN (cellulose nitrate)
- NYLON

## Critical interface.

Multi-column design delivers uniformity and consistency. The Rapid-Flow membrane support system, when coupled with any of our membrane options, offers fast flow rates and higher throughput.

## Surface for passive binding

## Covalent coupling surfaces

## Affinity Capture Surfaces

The right surface for your assay.

In this section, you will find valuable information about products relating to passive binding surfaces for biomacromolecules, covalent coupling surfaces for smaller biomolecules, and affinity capture surface for affinitytagged biomolecules. Immunoassay techniques are extremely sensitive and contain detection limits in the range of 10 fmol. In order to obtain accurate and reproducible results, it is essential that you choose the appropriate surface with optimized conditions.

By choosing a Thermo Scientific plate, you benefit from more than 30 years of industry-leading experience in immunoassay plate technology, and a broad range of surfaces and formats to optimize your assay.

## Thermo Scientific™ Owl Mini Gel Electrophoresis Systems

**EasyCast B1A**

- Perfect size to determine molecular weight ranges of PCR fragments or larger sized DNA molecule
- All in one design allows the option of casting and running a gel in the buffer chamber, eliminating the need for additional equipment. Two comb slots on gel tray double sample capacity by doubling number of sample wells
- UVT gel trays are silk screened with a florescent ruler for easy measurement of bands
- Feature leak proof casting that allows a gel to be cast and run in the same chamber with no tape or additional parts required
- Run from 5 to 24 samples in 15 minutes

**EasyCast B1**

- Offers a wide range of combs
- Two comb slots on gel tray double sample capacity by doubling number of sample wells

**EasyCast B2**

- Longer gel length and the 2 comb slots provide the flexibility of running 8 to 48 samples on 1 gel
- Optional multi load tray can increase the maximum number of samples to 108 in an 8 or 12 multichannel pipette format.
- 2 comb slots on the U.V. Transmissible (UVT) gel tray double sample capacity by doubling the number of sample wells

**EasyCast B3 - with Built-In Recirculation**

- Prevent the formation of pH and ionic gradients
- Do not require external pumps, tubing or stir bars, because recirculation system is built into buffer chamber
- Eliminate uneven migration, band distortion or disassociation of pH-dependent glyoxylated RNA molecules that can result when ionic depletion occurs

## Thermo Scientific™ Owl Wide-horizontal Gel Electrophoresis Systems

**D2 Wide-Gel**

- Wide gel size allows 15 or 30 samples to be loaded per row with a micro well comb
- Using special combs and a multichannel pipetter, samples may be loaded directly from a 96-well plate, 8 or 12 at a time
- Excellent for screening PCR samples or routine DNA fragment analysis
- Incorporates EasyCast\* casting design with external caster — gel tray is fitted with gasket, allowing it to fit snugly into caster and providing a leakproof seal without tape
- Electrode placement allows gel to be run quickly without compromising resolution

**D3-14 Horizontal**

- System screens 25 to 200 samples on a single agarose gel in less than 30 minutes.
- With special combs and a multichannel pipetter, samples are loaded directly from a 96-well plate, 8 or 12 at a time
- Sample loading with multichannel pipetter speeds up transfer
- Bubble level ensures casting of flat, uniformly thick gels

**A6 Horizontal**

- System screens 25 to 500 samples on a single agarose gel, producing clear.
- Gel tray's unique comb-slot design allows use of up to 10 evenly spaced combs
- With special combs and a multichannel pipetter, samples are loaded directly from a 96-well plate, 8 or 12 at a time

## P8DS, P9DS

- Quickly and easily casts and runs 1 or 2 gels in the same device
- Perfect tool for second dimension protocols of 2-D electrophoresis, SDS and agarose gels, and native PAGE electrophoresis
- Unique agarose plug method makes casting gel simple and quick. Gel assemblies do not have to be moved once set-up. Two individual steps of casting and running in different devices are now combined. Simply secure the glass cassettes, pour the agarose plug in the specially designed trough, cast polyacrylamide solution in the cassettes, load samples, and run the gel. Manufactured using a time-tested acrylic fabrication technology, providing a durable, long-lasting system
- Central cooling core provides even cooling across the gel surface for outstanding resolution and clear banding
- Cooling is achieved by circulating fluid through the core with external circulator or cool tap water

## P10DS

- Optimal device for a large number of samples that need extended separation and mobility shift assays
- Casts and runs one or two 20 × 20cm gels in the upper buffer chamber
- Larger size cassette gives the maximum number of samples and separation length
